# READY TO CHANGE

Wearable Prototypes for a Better Future

151.513 Workshop 1 SE WS 2019/20 Polonca Lovšin

In this workshop we will focus on creating wearable prototypes and tools that will help us humans to interfere with our environment (natural and social) more sensitively. We will deal with urgent issues of today's environmental and social crisis starting with changes of our own everyday habits. Our approach will be based on a believe that a small change for a better on individual level brings a corresponding change on societal level.

Futuristic, playful, absurd and based on recycling, wearable prototypes will seek solutions and propose new concepts of living, acting and communicating.
