

WORKSHOP

Do you also know this, the small mistakes and problems that you encounter in everyday life, with which you come to terms and whose solution you postpone until later? We have found a non-profit organization in Graz that knows all this too well and that we would like to support with our work together with you. For five days we will repair, stabilize, rework and re-test directly on site, sawing, hammering, drilling, screwing, painting and gluing. Finally, we will take enough time to photographically document our works. We stop at nothing, no problem is too big or too small: leaking gutters, stuck doors, small adjustments and improvements. Our goal is the simple, direct solution and the beauty hidden in it. We look forward to many hands-on students!
