

OPEN MASTER THESIS

▷ TOPIC

Assessment of Agility Levers in Production of Magna Steyr

▷ CONTENT

“Agility in manufacturing is the capability of a production company to proactively prepare for uncertainties and to react quickly to changes in order to optimize the economic situation of a company, by using the entire production network”

The objective of the master thesis is to develop criteria to assess agility levers. On the one hand, these levers can be assessed on technological level. On the other hand, different production layout concerning agility should be considered.

▷ DURATION

6 Months (paid thesis)

▷ STATUS

Start October 2017
