## The “Dark Ages”

Institut für Städtebau

### The decline of the Roman Empire

- The Roman Empire was a Mediterranean commonwealth, depending on the sea trade routes.
- After its decline in the 4th c. the sea commerce continued to be active until the 6th c., in contrast with the inland provinces.
- The dream of the Germanic tribes invading the territory, was to settle down. They were unable and didn't want to do without the Roman civilization. They barbarized it, but they didn't consciously germanize it.
- The Roman civilization prevailed over the conquerors by the Church, by the Latin language and by its institutions and law.

### The indoor factors on the European urban changes:

- In the course of the invasion of the Germanic tribes some frontier cities were destroyed, but the majority survived
- The Church patterned the religious districts after the administrative districts of the Empire: the **diocese** corresponded to the **civitas** (now “episcopal city”)
- The municipal institutions kept their *decuriones* – a corps of magistrates provided with a judicial and administrative authority
- The cities were as before the centre of economic activity, markets for the surrounding country-side. The commerce developed more highly in proportion to its nearness to the Mediterranean shores.
- But the territory of Europe no longer belonged to a single, centralized State.

### The outdoor factors on the European urban civilization:

- The Islamisation of Persia, Syria, Egypt, Africa and Spain between the 6th and the 8th c. changed the role of the Mediterranean sea to a barrier
- The Islamic conquest separated the West from the East of Europe and caused more changes in the European network of settlements than the invasions of the barbarians from the North
- Europe was forced to live by its own resources.  
The centre of gravity was shifted to the North, to the Frankish Empire
- The Frankish Empire was in difference to the maritime Roman Empire an inland one, defending the sea shores against Saracens and Norsemen.  
It turned to an agricultural State without foreign markets
- The European urban civilization broke step by step with the civilization of the antiquity.  
The commerce was reduced to local and regional scales; the merchants disappeared, so the urban population.

The adaptation of the Roman town:

- The urban typology of the Roman Empire remained in the West, as in the East (the Byzantine Empire): a rectangle surrounded by ramparts flanked by towers and communicating with the outside by gates, to the number of four.
- The case of the adapted and rising city
- The case of the shrinking city: between the houses cultivated fields and gardens were to be found

The fortified settlement:

- The economic base of the State, as of society, was the landlord.  
A new urban typology was established – the settlements on the feet of the fortified residence of the landlord (the Medieval castle), which dominated in the silhouette.
- The burgus (Burg, borough, bourg, borgo)
  - the walled circular and surrounded by a moat and the tower as a last redoubt of defense;
  - the domus (the residence) of the landlord;
  - the chapel or church

The population of the burgus was a fortress population, not an urban one.  
It consisted of a few hundred men.

New typologies caused by the role of the church and the monasteries:

- The church tower dominating in the silhouette of the city was a new element of the urban shape
- The monasteries were receiving gifts of land.  
Some settlements in front of the monastery started establishing after the 7th c.

Cities and urban laws do not have much significance

Contempt of the settled way of life

The power is divided and lies in the hands of the Church and the secular rulers (the feudal system)

City development impulses:

- bishops have to live in cities (from the First Council of Nicaea in 325)
- tradesmen and craftsmen formed fortified settlements around centers of power: market rights > city rights

Upswing in development from the 9th century onwards: increase in population, Christianity spreads in Central Europe

### Monastery of St. Gallen (ca. 820)

Regular design of monasteries - St. Gallen has the exemplary layout

11th-13th century: colonisation of the countryside around the monasteries

Self-supporting complexes of buildings

- The 10th c. was a period of stabilization and relative peace. It marks the end of the invasions of the Norsemen in the West, and the Slavs and Hungarians in the East. Europe “colonised” herself, thanks to the increase of population.
- The need for settlements forced the princes and landowners to extend existing towns or to establish new towns.
- The 11th c. was marked by the revival of the commerce. This revival received its impetus from new centres of activity:
  - Venice in the South
  - the Flamish coast in the Northwest and
  - the Baltic and the North sea (the Hansa Towns).

The change was once again the result of an external stimulus.

- Venice was an isolated outpost of the Byzantine civilisation (Constantinople was the greatest city in the Mediterranean with a population of a million inhabitants). Venice profited by the alliance with Byzantine: it owned the prosperity of her commerce, the higher forms of civilization, the technologies, the business enterprise, the political and administrative organisation.
- The extension of Islam came to an end in the 11th c. The Mediterranean remained in the hands of the Christians. Genoa and Pisa followed soon the example of Venice, but on a more militant way.
- The European waterways and the coasts were a stimulus for a surplus of production and extension of commerce. This explained the rise of the commerce in the Netherlands and the economic awakening of Flanders.
- The Scandinavians turned in the 10th c. away from war to devote themselves to trade. They played the mediators between the Russian cities and Flanders giving a fresh impulse to manufacture.

- Western Europe was definitely transformed in the 12th c. due to the extension of commerce and manufacture. The increase of the population was in direct relation to this phenomenon. It had as a result the detaching from the land to the towns. These were the internal stimulus for an uninterrupted urban growth.
- As agrarian civilization had made of the peasant a man whose normal state was serfdom, trade made of merchants a man whose normal condition was liberty.
- The commercial activities were located outside the existing towns or burghs, because of the lack of space inside. The commercial suburb (the new burg) received more importance for the feudal burg offering the milieu for the urban middle class.

## The establishing of the municipal institutions in the Late Middle Age

- The suburbs were established on lands owned by the church, the monaster-ies or landlords, which caused conflicts between the old desmenial organisa-tion and the the aspirations of the new middle class.
- The monarch was accepted as arbitrator of the quarrel, which meant to rec-ognize his sovereignty. The entry of the middle class on the political scene had as a consequence the weakening of the Feudal State to the advantage of the centralized Monarchical State.
- The political quarrel leaded to the organisation of guilds to defend the interests of the merchants and manufacture owners. The guilds formed, de facto, the functions of communal magistrates in the towns. Little by little the middle class came out as a distinct and privileged group in the midst of the popula-tion in the country, recognized by the authority of the monarch. Since the 12th c. a number of cities were recognized by granted charters as legal territories, provided with special laws and courts, and a full communal autonomy.

## Bastides

Fortified new towns built in medieval southwest France during the 13th and 14th centuries

Firstly it was decided that a bastide should be built - then its inhabitants were settled

MONTREAL

Stralsund, Grundriß Rathaus, St. Nikolai und Markt im Spät-Mittelalter

The burgers of the Middle Ages were thus singularly well prepared for the role which they were to play in the two great movements of ideas: the Re-naissance and the Reformation.
