

Amanda Donofrio is an undergraduate student at the University of Waterloo, Canada. She is studying Environment and Business with a minor in Environment, Resources, and Sustainability along with a diploma in Environmental Assessment. Aside from co-op work experiences within the digital media and marketing industry, Amanda is very active within the University, participating in various ambassador roles, hackathons, and innovation projects. Some projects she has worked on focus on the housing crisis in Ontario, food waste reduction, and environmental monitoring strategies.

Amanda will be working on the Climate-Neutral University project at TU Graz, where she will be examining the infrastructure, mobility management, energy, materials, and other aspects that the university has and is planning to implement. To achieve climate neutrality by 2030, greenhouse gas emissions must be reduced of which methods to do so will be explored through research during the term.
