

**Paula De Pablos Sanz** holds a double degree in Law and International Relations from IE University (Spain), and she completed an exchange semester at O.P. Jindal University in Sonipat (India), where she developed her interest on feminist critical thinking. She also holds a master's degree in Science, Technology and Society from Maastricht University (the Netherlands). Accordingly, the research conducted for her master's thesis is based on a combination of Ethics of Care accounts with Innovations Studies in order to develop a common feminist critical framework that foregrounds the idea of care as a tool promoting radical change within industrial farming, and as a basic framework for assessing the direction of sustainable innovations.

At the present moment, within the STS Unit she is a PhD student at the HydroFRAME project.

Main fields of research

---

socio-technical change, sustainable transition, innovation studies, ethics of care

## Main fields of research

---

Sustainable transitions, energy transition, energy storage
