

Viktoriia Iavorskaia, BA studied economics and sinology for her bachelor's and currently is at the final stage of her master's degree program in sustainable development with a specialization track in corporate social responsibility. At the STS-unit, she is working on mapping out the global innovation system, its actors, networks and development trends in frames of the LignoFracStore project. Her future master thesis will be based on some of the study results attained at this project.

Main fields of research

Sustainable transitions, energy transition, energy storage
