

On the Characterization and Evaluation of Flexibilities in Real-Time Trading and Portfolio Optimization

Carlo Corinaldesi

16. Symposium Energieinnovation
12-14/02/2020
Graz

Session: Flexibilitätsmärkte

The Flex+ project (No 864996) is being funded under the 4th call of the energy research program of the Austrian Research Promotion Agency (FFG) and the Climate Energy Fund.

- **Target country:** Austria
- **Start:** 05.2018
- **Duration:** 36 Months (04.2021)
- **Coordinator:** AIT Austrian Institute of Technology GmbH (AIT)
- 15 Partners

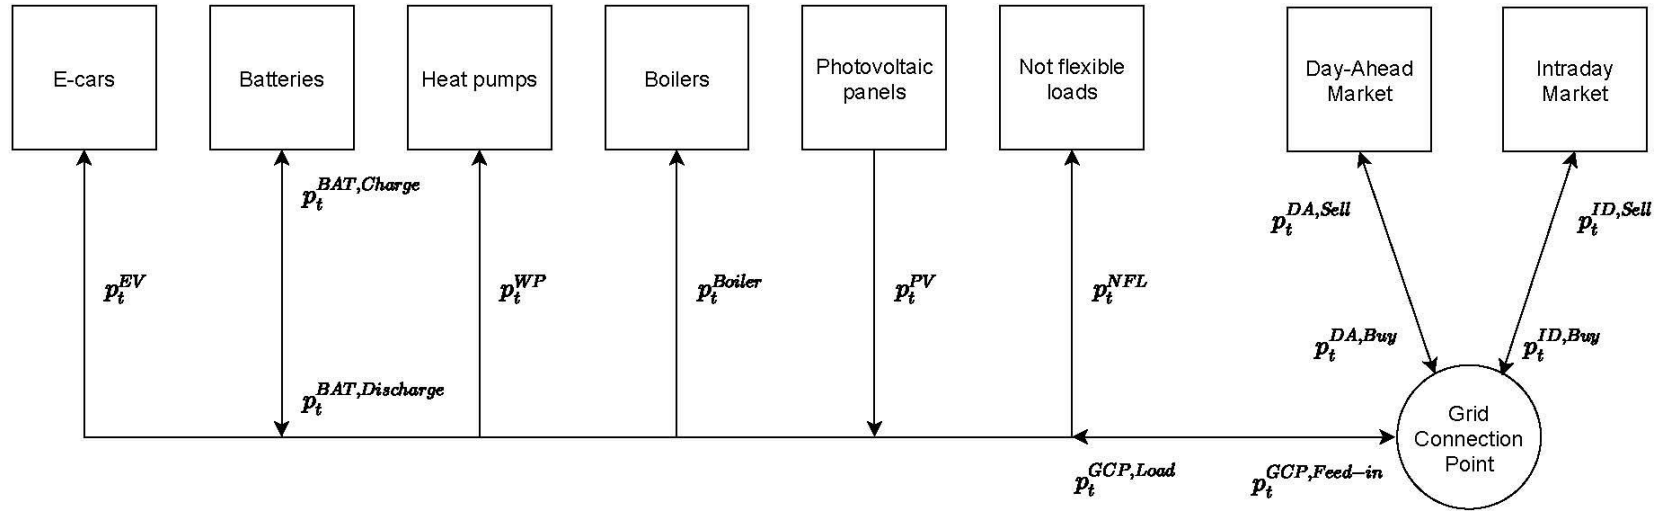

The Flex+ project (No 864996) is being funded under the 4th call of the energy research program of the Austrian Research Promotion Agency (FFG) and the Climate Energy Fund.

- *"The need for flexibility in the grid is increasing, because of the growing share of renewable energy resources and it's volatility. (R.A. Verzijlbergh et al. 2017)"*
- *"The power system is moving from a central to a decentralized energy system. The new system includes more distributed generation, energy storages and requires a more active involvement of consumers, e.g. through demand response. (P. D. Lund et al. 2015)"*
- *"Appropriate building energy management systems, coupled with an optimized bidding strategy, can provide significant cost savings for prosumers. (M.S.H. Nizami et al. 2019)"*

- *"A simple and exhaustive description of flexibilities is needed to efficiently coordinate and aggregate multiple flexible actors. (Valsomatzis et al. 2017)"*
- Research question 1: How to formulate flexibilities of different technologies?
- *"One of the objectives of smart grid is to enable participation by informed customers in order to realize money and energy savings. (T. Hubert et al. 2012)"*
- Research question 2: What are the financial benefits of Real-Time Trading and Portfolio Optimization for customers?

- In order to settle the optimization problem of the Energy management System, we use the *Python* optimization modeling language *Pyomo* to implement the model and the *Gurobi* solver to solve it.
- It is a rolling optimization.
- An optimization problem (*MILP*) is defined and solved every hour, in order to update the schedules.
- The intraday marketing takes place every hour.
- On the intraday market, purchases / sales are dealt for the next 3 hours.

Energy markets:

- Day-ahead spot market (EPEX)
- Intraday spot market (EPEX)

Assumptions:

- Perfect Load Forecasts
- No Power Tariff

Optimization Inputs:

Data

- 30 Charging Stations (*136 Charging Processes*)
- 1 Battery (*80 kWh, 80 kW*)
- 6 Photovoltaic panels (*3.6 MWh, 190 kWp*)
- Building Load (*10 MWh*)
- Grid Connection Point limitation (*100 kW*)

Period

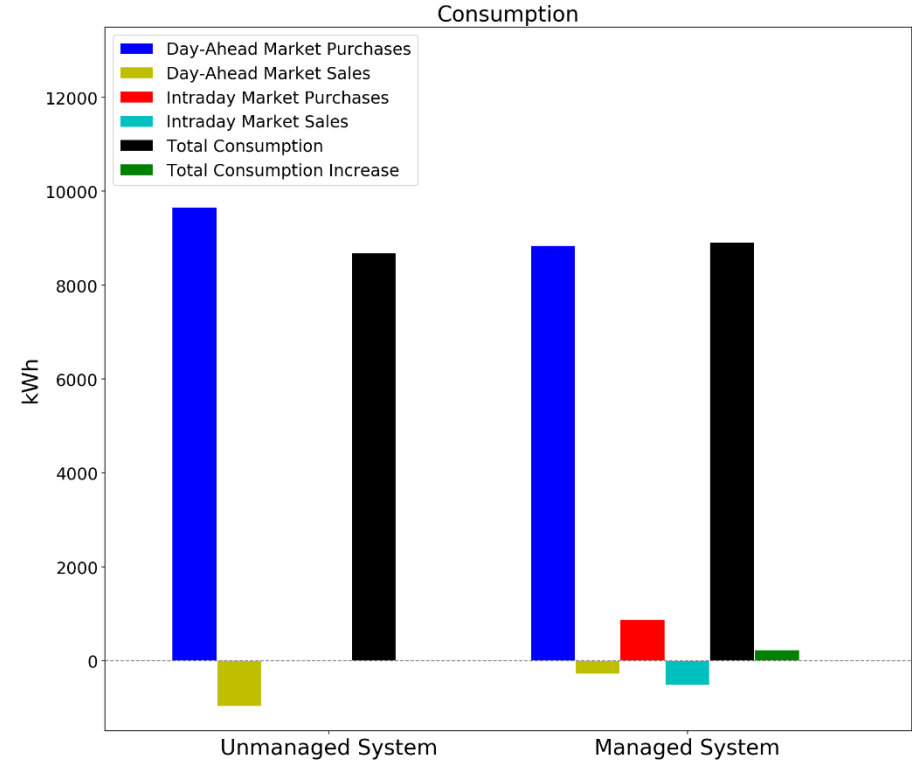

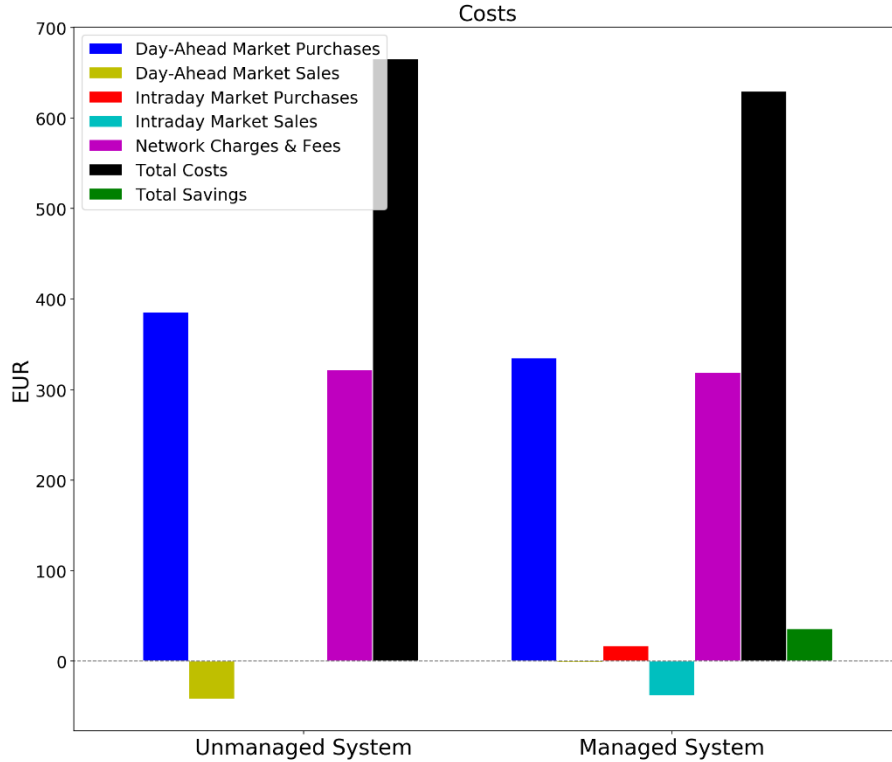

- 06.01.2020 – 20.01.2020

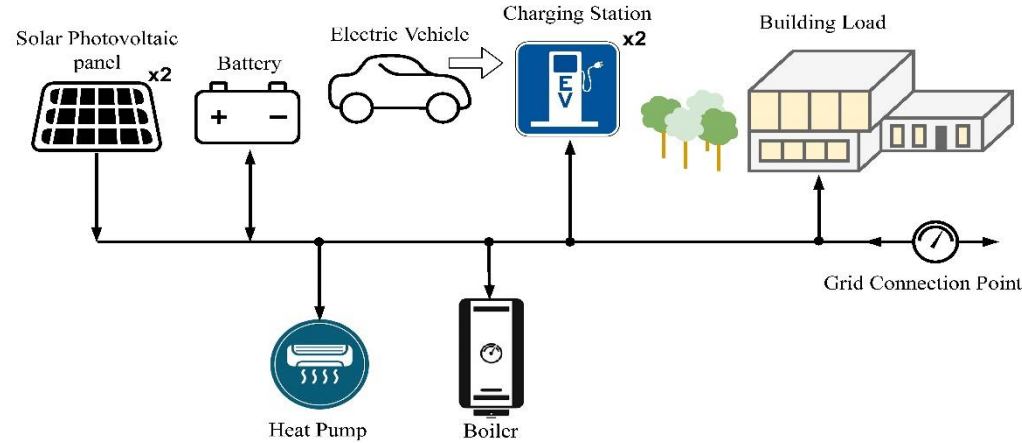

Goal:

Investigate the value that the flexibilization of the technologies of the WEB Energy Management System may create in a period of two weeks.

Optimization of the Energy Management System WEB

Energy markets:

- Day-ahead spot market (EPEX)
- Intraday spot market (EPEX)

Assumptions:

- Perfect Load Forecasts
- No Power Tariff

Optimization Inputs:

Data

- 2 Charging Stations (1 Charging Processes)
- 1 Battery (12 kWh, 6 kW)
- 2 Photovoltaic panels (0.49 MWh, 82.3 kWp)
- Building Load (1.4 MWh)
- Grid Connection Point limitation (40 kW)
- 1 Boiler (6.6 kW)
- 1 Heat Pump (2.78 kW)

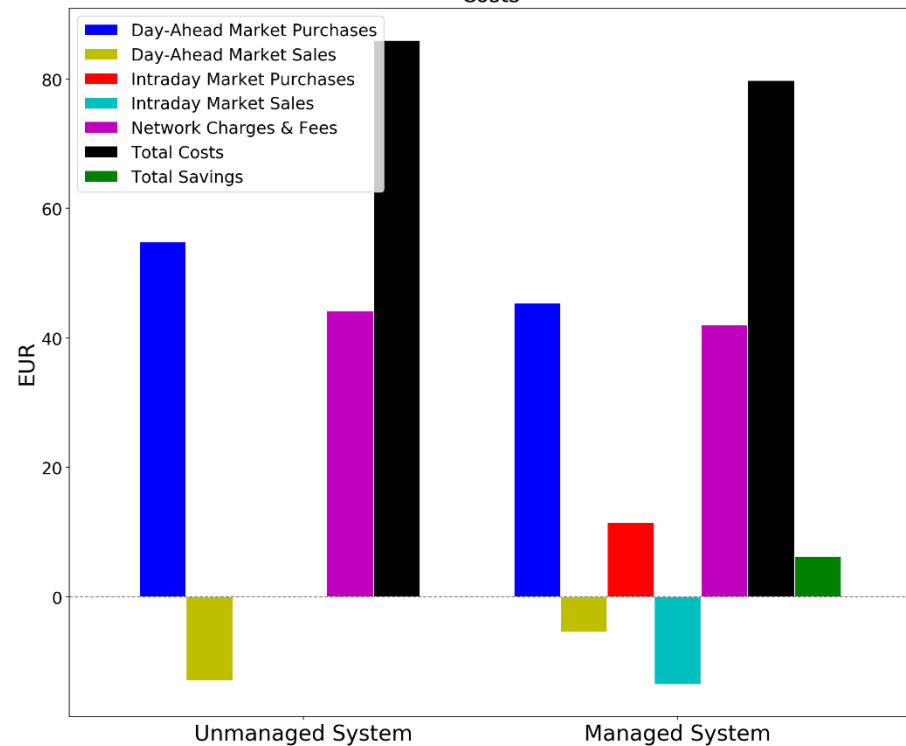

Goal:

Investigate the value that the flexibilization of the technologies of the WEB Energy Management System may create in a period of two weeks.

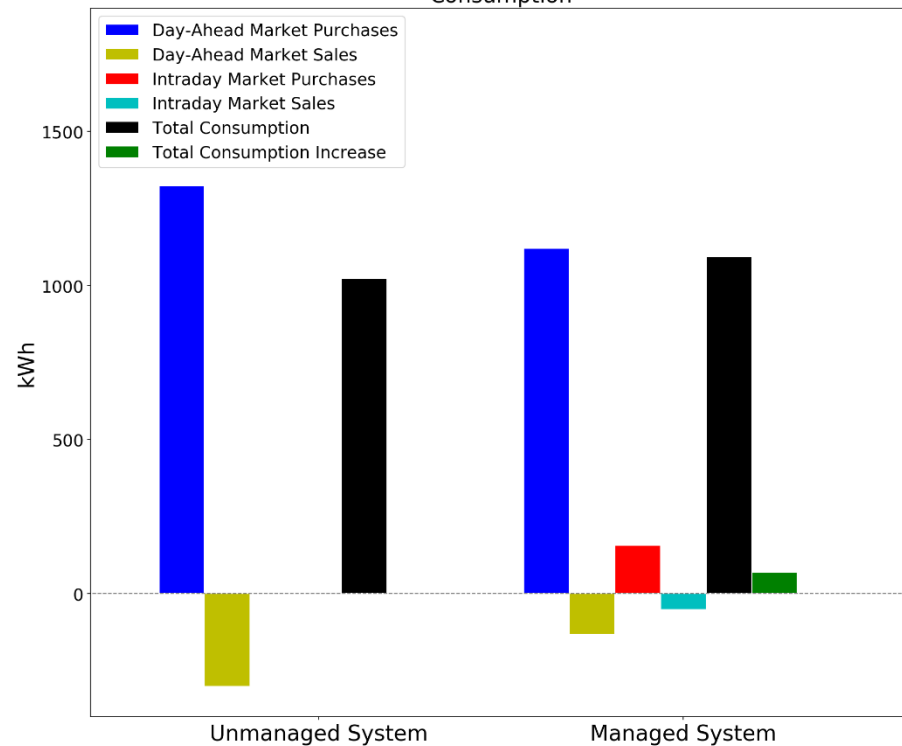

Optimization of the Energy Management System Großschönau

Costs

Consumption

- Our work presents a comprehensive overview of modeling and evaluating the flexibilities of an Energy Management System.
- We describe multiple flexible technologies as virtual batteries and implement them in a mathematical optimization problem.
- We control the power flows of the Energy Management System through a rolling optimization framework.
- We applied our proposed methods to two different real-life use cases in Austria with metered data.
- Our work shows, how aggregating flexibilities results in energy costs reduction.

It's all very well to have principles, but when it comes to money you have to be flexible.

(Eugene Ormandy - Hungarian-American conductor and violinist)

Thank you for your attention

Carlo Corinaldesi
