## Smart Renovation Factory by INDU-ZERO

# Background

- Interreg NSR (North Sea Region) project
- Total budget 4,4 Million €
- Start project July 2018 - Duration 3 year unit July 2021
- 15 project partners in total 30 persons
- 6 countries from Northern Europe
- 5 members advisory board

# Partners and advisory board

# Main steps in the project

1. **Assessment of the housing stock**
2. **Development of the renovation packages**
3. **Development of the factory blueprint**
4. VR and AR visualization
5. Showcases

# Assessment of the housing stock

# 1. Assessment of the housing stock

Reference dwellings: 3 arche types  
from 1965 - 1975

Terraced

Semi-detached

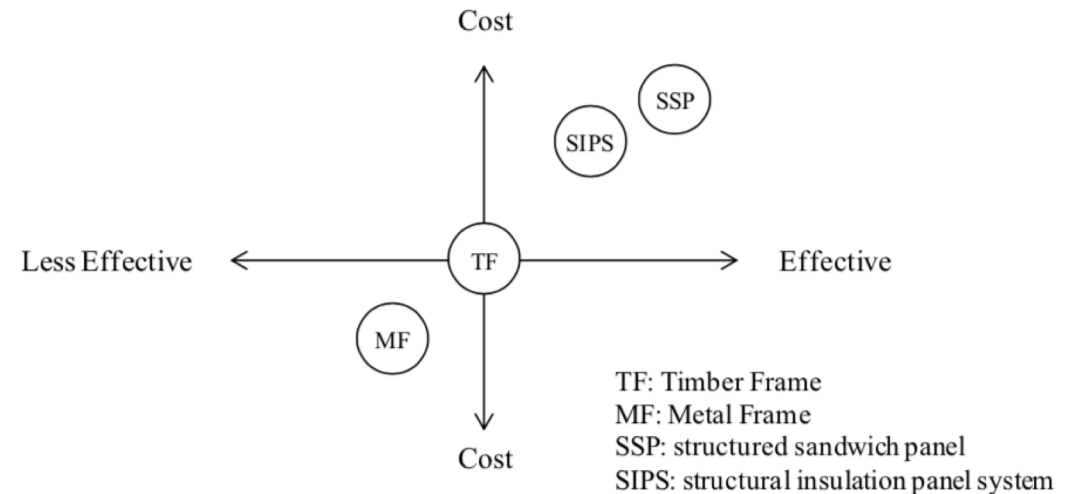

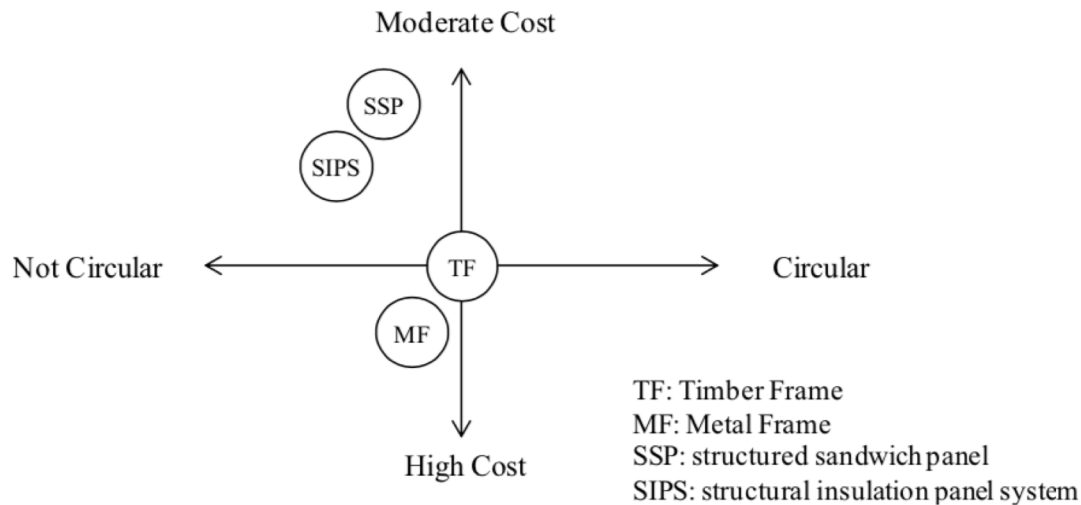

Appartement

# Development of the renovation packages

## 2. Development of renovation packages

- Combination of findings
- SSP: Best according costs and effectiveness
- Timber and SSP panels score equal with short life-cycle analysis

## 2. Development of renovation packages

### Facades

(Sandwichpanels with EPS)

### Roofs

(Sandwich or Timberframe)

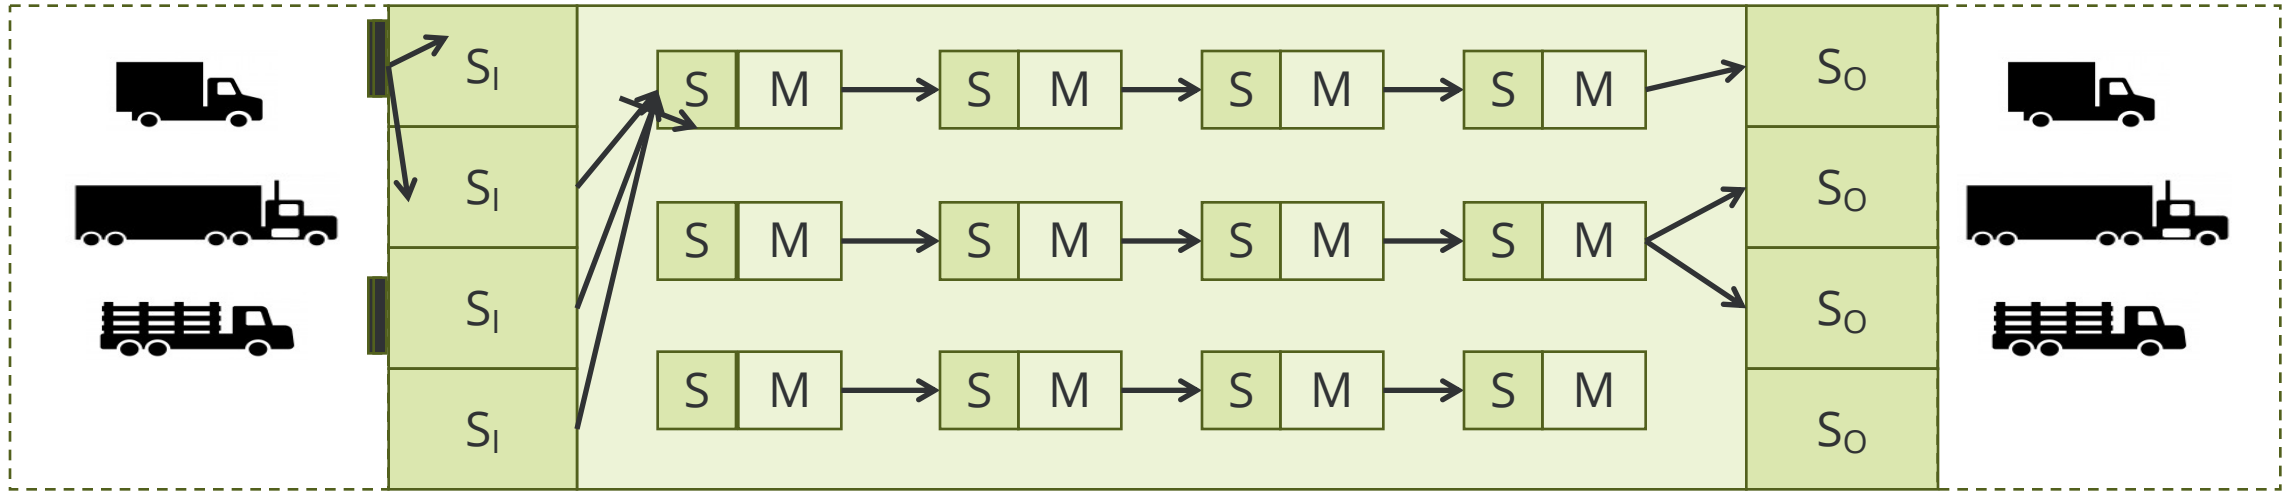

## 2. Development of renovation packages

# Development of the factory blueprint

### 3. Development of a factory blueprint

#### Inbound Logistics for each material:

- ***Required Area?***
- Number of truck arrivals / day?
- Capacity: Required days of inventory
- Loading ramps: time slot management?
- Driving and parking areas (truck routing, Gigaliner)

#### Outbound Logistics:

- ***Required Area?***
- + Accessibility / commissioning
- + Coordination with construction site

# 3. Development of a factory blueprint

## Challenge: Number of elements

**Target: 15.000 dwellings per year**

250 days/year

60 dwellings/day

9 elements

**540 elements / day !**

➤ *High challenge for logistics processes!*

# 3. Development of a factory blueprint

## Supply Chain View

### Round trip calculation:

- *How many trucks are needed?*
- Distances
- Disturbances, delays

# Take home message

# Take home message

**Industrial Net Zero renovations for half the current price!**
