

CAMPUSonline

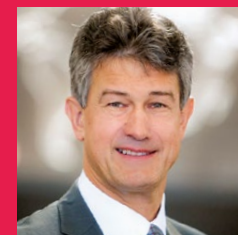

The Academic Life Cycle
Management System

CAMPUSonline

is the efficient and sustainable information management and administration system of Graz University of Technology, used by 37 further higher education institutions in Austria and Germany.

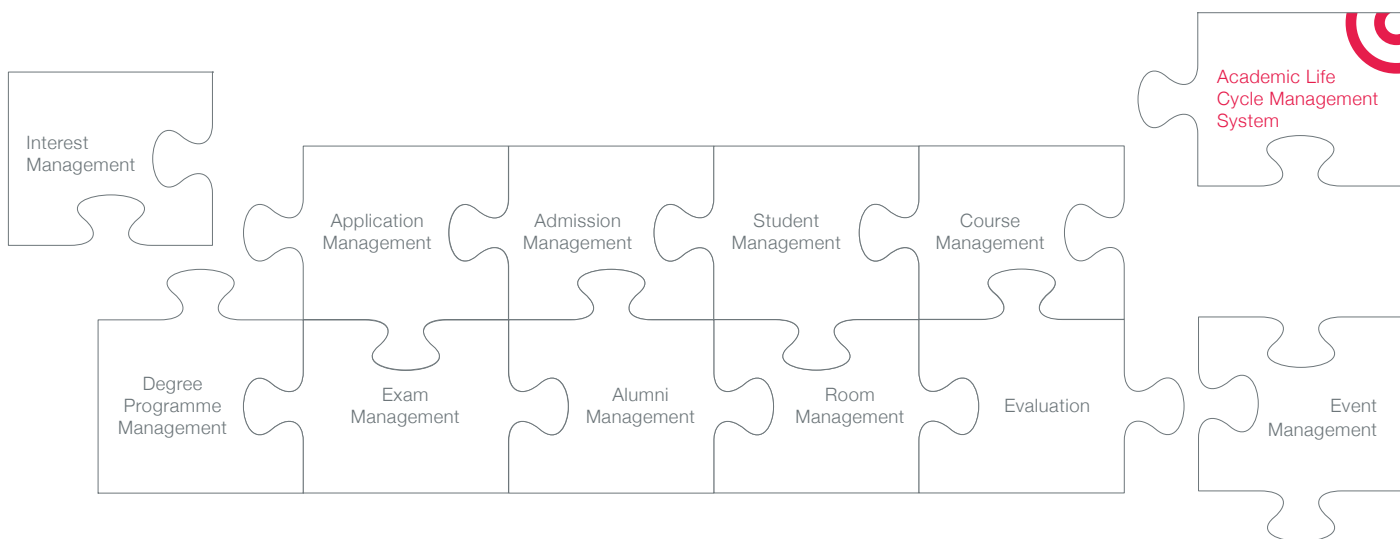

Operating since 1998, CAMPUSonline by now supports almost 500,000 students and more than 112,000 staff members of universities, universities of applied sciences and universities of education. From the application for a degree programme and the management of students and exams to the completion of a degree – CAMPUSonline covers the entire student life cycle and allows managing all administrative matters at higher education institutions.

Graz University of Technology is proud of CAMPUSonline and aware of its responsibility for maintaining and further developing the system. It is our goal to continuously improve the software in close collaboration with our cooperation partners in order to be able to offer the most flexible academic life cycle management system also in the future.

Harald Kainz,
Rector of Graz University of Technology

Features of CAMPUSonline

Student Life Cycle

CAMPUSonline is both an information as well as an administration system, providing all essential features that are relevant throughout the student life cycle for students, lecturers as well as for staff members of centralised and decentralised administration bodies at higher education institutions. The system covers all areas – from the degree programme offer, the application process for prospective students and applicants as well as the collection and management of student data to the organisation of the entire studies (courses, exams, evaluations and theses) to alumni services.

- The initial setup of the Rights Management, personal and user profiles as well as Room and Resource Management serves as the basis for the student life cycle.

- The whole admission process of a higher education institution can be organised using the Application Management tool. Prospective students can browse through the range of degree programmes to make their choice, apply for a programme and stay informed about their application and admission status.
- In the Student Management application, the students' data is managed from the very beginning of their studies until their final graduation.
- All courses can be planned, created and edited in the Courses area.
- The Exam Management application contains the exam registration system as well as students' results and allows managing academic progress and degrees.

- Alumni matters beyond the graduation of students can be organised in the alumni database of CAMPUSonline.

Additional Features

When it comes to research, CAMPUSonline offers an application for performance recording as well as a flexible tool for mapping all kinds of form-based processes. These features facilitate the process of applying for research projects or displaying results and awards granted for research achievements.

Two further features of CAMPUSonline cover university administration and customer relationship management (CRM). While the former allows you to display any form-based university processes such as leave requests or thesis applications, the latter can be used to organise all contacts in a specific contact database.

CAMPUSonline Milestones

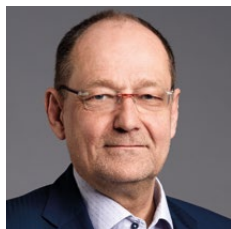

- 1998 The first fully web-based academic life cycle management system goes live at TU Graz
- 2003 Start of cooperation with other Austrian higher education institutions
- 2008 Start of cooperation with German higher education institutions
- 2010 CAMPUSonline wins the Bavarian eGovernment Lion Award by the Bavarian state government for the best academic administration system
- 2016 Almost 500,000 students use CAMPUSonline

The CAMPUSonline Student File application and Curriculum Support application offer

a clear overview of every student's current status of studies at a glance. This helps me to quickly recognise any problems concerning their studies and to give them efficient and competent advice right away in my consultation hours.

Student Administration, Technical University of Munich

I can recommend CAMPUSonline as a sensible partner offering a lot of experience and insight into how universities work.

Vice Rector for Teaching and Studies (2011 to 2018),
University of Cologne

CAMPUSonline helps me to easily and conveniently plan and manage my whole university studies. I am glad to use this system!

Katharina Gruber
Student, University of Graz
