Where the human factor is not sufficiently included in questions, technology and natural sciences also produce gaps. We are looking for examples of where and how these gaps are successfully closed at Graz University of Technology and are advertising five prizes, each worth Euro 1,000.

Are you studying, teaching or researching at Graz University of Technology? Do you make reference to people in your work? Do aspects such as age, gender, disability, previous experience etc. play a role? Do you deal with the impact of technology and natural sciences on society? Do you address these effects in your courses? Do you design courses being aware that different students need different framework conditions? Did you attend a further education course or conference on such issues in the winter semester? Or does this take place in the summer semester and do you want to attend it?

Then apply for the prize!

Submissions are possible from 8 March to 30 September 2019. Further information: www.tugraz.at/go/diversitaet
